PROFILE

iOS engineer since 2012: started in Objective-C, writing Swift since its 2014 release, building UI mainly in SwiftUI today. Since 2026 I also build the apps' React Native / Expo successor, in production for 11 markets, including native modules in Swift and Kotlin; earlier Flutter (2022). For the last four years I have co-owned the architecture of Preglife's apps: two native iOS applications (~70 Swift packages) and their React Native successor. I own the full cycle: from architecture to CI/CD and releases on both stores.

SKILLS

iOS	Swift (since 2014) · SwiftUI · UIKit · Objective-C · Swift Concurrency · Combine · SPM & modular architecture · Coordinator / MVVM · dependency injection · Core Data · WidgetKit · push notifications & deep linking · StoreKit / RevenueCat
Process & quality	unit / snapshot / E2E testing (XCTest, Jest, Maestro) · CI/CD & release management (Fastlane, GitHub Actions, EAS) · code review · analytics & crash monitoring (Firebase, Crashlytics) · CRM & attribution (Braze, AppsFlyer)
Cross-platform	React Native · Expo · TypeScript · TanStack Query · local-first sync (SQLite) · GraphQL / REST · native Expo modules (Swift, Kotlin) · Flutter / Dart
AI tooling	Claude Code · agent rules (CLAUDE.md) · MCP (Jira, Confluence, Figma)

EXPERIENCE

Senior Mobile Engineer · Preglife

May 2022 – present · Katowice, Poland

App for expectant and new parents, 11 markets · App Store 4.9/5, 29k ratings · apps.apple.com/app/id390427747

React Native / Expo · May 2026 – present

New iOS and Android app released in October 2026 in place of both native apps; team of five.

- Own the offers and ads module and account sharing; also built the Tools, Wellness and Checklist modules, from the data layer through to analytics.
- Designed and built the data migration from the native apps into the local database (SQLite, local-first), for accounts and local-only data; users moved to the new app through a regular update, without data loss.
- Automated the team's tooling: AASA and assetlinks generators built from the app config instead of a hand-maintained list, a shared encrypted .env (sops, age), and Maestro E2E tests with a recording and analytics report per run in GitHub Actions.
- Wrote native Expo modules in Kotlin and Swift: a Braze bridge (deferred SDK initialisation, in-app message actions) and a home-screen widget for iOS (WidgetKit) and Android (Glance).

Native iOS · May 2022 – May 2026

Two native apps (international and Norwegian): UIKit, SwiftUI, Combine, Core Data; 11 markets, team of 2–4.

- Co-designed and maintained the modular architecture: ~70 Swift packages on a shared codebase, 26 of which I created myself, including the networking and API layer (REST, GraphQL with Apollo), the user, pregnancy and baby domain models, mapping of GraphQL widgets to UI and deep-link handling (clear module boundaries at the cost of full-build time).
- Delivered the Onboarding, Settings, Offers, Tools, Search, Statistics and Sleep Sounds modules (audio engine, background timers, widget) and the home-screen widgets.

- Designed and implemented the app's theming system: colours, typography and spacing defined in one place, so periodic visual refreshes need no changes to feature code.
- Owned third-party and partner integrations: Braze, AppsFlyer, Kevel native ads, RevenueCat subscriptions, Contentful, Apollo GraphQL, insurers If (Finland) and Tryg (Denmark), and MitID identity verification.
- Set up and ran the release process for both apps (2–6 releases a month): Fastlane and GitHub Actions pipelines to TestFlight and the App Store, Match signing, lint and unit/snapshot tests on every PR.

Flutter Developer (contract) · Coolomat

Jan 2022 – Mar 2022 · remote

Slovenian maker of refrigerated parcel lockers · Coolomat Pick-Up app for iOS and Android in Flutter · lead developer in a two-person team

- Bootstrapped the project and designed its architecture (data / domain / presentation layers, use cases, RxDart, GetX) and the integration with Coolomat's reservation API: order list with pick-up QR codes, remote locker opening after a GPS distance check, phone-number verification.
- Integrated Firebase push notifications with token registration, consent and permission handling in settings, and EN/SL translations; prepared icons and builds.

Senior Software Engineer (iOS) · DAZN Group

Apr 2020 – Apr 2022 · Katowice, Poland

Global live-sports streaming platform · iOS app in Swift with RxSwift (FRP), MVVM with a service layer

- Owned the ads and video playback area of the DAZN iOS app within a cross-platform Scrum team (iOS, Android, web).
- Wrote unit, snapshot, integration and Gherkin acceptance tests and supported QA with test automation; maintained CI builds (Jenkins).
- Took part in hiring iOS engineers: assessed candidates' assignments and conducted technical interviews.

Senior Software Developer · EUVIC

Jan 2014 – Apr 2020 · Gliwice, Poland

Software consultancy · iOS projects for a range of clients

- Payr (Norwegian fintech startup): built a bill management and payment app from scratch, integrated with payment services and identity providers.
- Developed Bosch Drivelog Connect (car data over Bluetooth / OBD2) and SUBWAY Loss Prevention (camera footage matched to live transactions) and UPTIVO Trainer (fitness with peripherals).

iOS Developer · Grupa SPOT · KiooiK

Jun 2012 – Dec 2013 · Gliwice / Wrocław, Poland

- Wrote the mHOSP iPad app for the med-tech industry, the Dr. Oetker Rezeptideen recipe app and an iPad memory game in Objective-C and Cocos2d.

HOBBY PROJECTS

Underfloor heating controller · electronics, hobby project

Self-designed controller on an ESP-01S (ESP8266) module with ESPHome firmware and Node-RED automation.

EDUCATION

B.Eng., Computer Networks and Telecommunications
Institute of Information Technology and Telecommunications in Kielce · 2004–2008
