PROFILE

Mobile engineer with 18 years in software and 14 years on iOS. For the last four years I have co-owned the architecture of Preglife's apps: two native iOS applications serving 11 markets (~140 Swift packages), and since 2026 their React Native / Expo successor. I take features from idea to store release, make architecture decisions together with the team and keep quality high through tests, CI/CD and code review.

SKILLS

Languages	Swift (since 2014) · Objective-C · TypeScript · Kotlin (native bridges)
iOS	SwiftUI · UIKit · Swift Concurrency · Combine · Swift Package Manager & modular architecture · Coordinator / MVVM · dependency injection · Core Data · WidgetKit · push notifications & deep linking · StoreKit / RevenueCat
Engineering	unit / snapshot / E2E testing (XCTest, Jest, Maestro) · CI/CD & release management (Fastlane, GitHub Actions, EAS) · code review · analytics & crash monitoring (Firebase, Braze, AppsFlyer, Crashlytics)
Cross-platform	React Native · Expo · TanStack Query · local-first sync (SQLite) · GraphQL / REST

EXPERIENCE

Senior Mobile Engineer · Preglife

May 2022 – present · Katowice, Poland

Pregnancy and parenting app, 11 markets · App Store 4.9★, 29k ratings · new RN app: 99.6% crash-free users (Crashlytics, 7 days, Oct 2026)

- Since May 2026, as one of five engineers, built Preglife's new React Native / Expo app (iOS + Android), which has replaced both native apps; existing users, both account-based and local-only, were migrated without data loss.
- In the new app, own the offers and ads module and account sharing; co-own local-first SQLite sync, authentication, onboarding and the import of data from the native apps; built the Tools, Wellness and Checklist modules from the data layer through to analytics.
- 2022–2026: in an iOS team of 2–4 engineers, co-designed and maintained the modular architecture of two native iOS apps (international and Norwegian) for 11 markets, ~140 Swift packages, a deliberate trade-off: clear module boundaries at the cost of build time; authored the Onboarding, Settings, Offers, Tools, Search, Statistics and Sleep Sounds modules (audio engine, background timers, widget) and the home-screen widgets.
- Designed and implemented the app's theming system: colours, typography and spacing defined in one place, so periodic visual refreshes need no changes to feature code.
- Owned third-party integrations and partner flows: Braze, AppsFlyer, Kevel native ads, RevenueCat subscriptions, Contentful, Apollo GraphQL, insurance partners (If Finland, Tryg Denmark, MitID).
- Built and ran the release process for both apps (2–6 releases a month): Fastlane and GitHub Actions pipelines to TestFlight and the App Store, code signing with Match, lint and format checks on every pull request.

Experienced Software Engineer (iOS) · DAZN Group

Apr 2020 – Apr 2022 · Katowice, Poland

- Worked on ads and video playback in the DAZN iOS app (live sports streaming), in a Scrum team spanning iOS, Android and web.
- Wrote unit, snapshot, integration and Gherkin acceptance tests; worked closely with QA on release quality.

Senior Software Developer · EUVIC

Jan 2014 – Apr 2020 · Gliwice, Poland

- Payr (Norwegian fintech startup): built from scratch a bill management and payment app, integrated with payment services and identity providers.
- Developed Bosch Drivelog Connect (car data over Bluetooth / OBD2) and SUBWAY Loss Prevention (live surveillance combined with transactions), and built UPTIVO Trainer from scratch (fitness app syncing connected peripherals).

iOS Developer · Grupa SPOT · KiooiK

Jun 2012 – Dec 2013 · Gliwice / Wrocław, Poland

- Built from scratch the mHOSP iPad app for the med-tech industry, the Dr. Oetker Rezeptideen recipe app and an iPad memory game in Objective-C and Cocos2d.

PHP Developer · eSKY · E NET PRODUCTION · RSI internet

Jul 2008 – Jun 2012 · Katowice / Rybnik, Poland

- Built the flight-search backend, e-commerce platform modules and intranet software (PHP 5); web-service integrations, production deployments, Scrum.

AI TOOLING

- Work daily with coding agents (Claude Code, Codex) on production iOS and React Native apps: implementation, tests, refactoring, PR reviews.
- Build context for agents: co-author of repository instructions (CLAUDE.md / AGENTS.md), author of project skills (Graphify code knowledge graph for ~140 packages, snapshot tests, analytics) and personal ones (Copilot PR comments, crash-log analysis, PR-to-Slack).
- Wire agent tooling into the team workflow: MCP servers (Jira / Confluence, LSP, Figma), hooks and commands; run hobby projects entirely with an agent, with an automated verification loop (build → tests → render).

HOBBY PROJECTS

Underfloor heating controller · electronics

Self-designed controller on an ESP-01S (ESP8266) module with ESPHome firmware and Node-RED automation.

Garden greenhouse · design and build

Parametric 3D model in FreeCAD generated from Python, with cut list, cutting-layout optimisation, workshop drawings and a sunlight simulation.

EDUCATION

Bachelor of Engineering (B.Eng.), Computer Systems Networking and Telecommunications
Institute of Information Technology and Telecommunications in Kielce · 2004–2008
