PROFILE

iOS engineer with 14 years of Swift and SwiftUI practice; since 2022 I have also been building cross-platform apps: Flutter, and since 2026 React Native / Expo in production for 11 markets, always from the native side (Expo modules in Swift and Kotlin, widgets, SDK integrations). For the last four years I have co-owned the architecture of Preglife's apps: two native iOS applications (~70 Swift packages) and their React Native successor. I work across the full cycle: from architecture to CI/CD and store releases.

SKILLS

iOS	Swift (since 2014) · SwiftUI · UIKit · Objective-C · Swift Concurrency · Combine · SPM & modular architecture · Coordinator / MVVM · dependency injection · Core Data · WidgetKit · push notifications & deep linking · StoreKit / RevenueCat
Engineering	unit / snapshot / E2E testing (XCTest, Jest, Maestro) · CI/CD & release management (Fastlane, GitHub Actions, EAS) · code review · analytics & crash monitoring (Firebase, Crashlytics) · messaging & attribution (Braze, AppsFlyer)
Multiplatform	React Native · Expo · TypeScript · TanStack Query · local-first sync (SQLite) · GraphQL / REST · native Expo modules (Swift, Kotlin) · Flutter / Dart
AI tooling	Claude Code · agent rules (CLAUDE.md) · MCP (Jira, Confluence, Figma)

EXPERIENCE

Senior Mobile Engineer · Preglife

May 2022 – present · Katowice, Poland

App for expectant and new parents, 11 markets · App Store 4.9/5, 29k ratings · apps.apple.com/app/id390427747

React Native / Expo · May 2026 – present

New iOS and Android app released in October 2026 in place of both native apps; team of five.

- Own the offers and ads module, account sharing and the import of data from the native apps; also built the Tools, Wellness and Checklist modules, from the data layer through to analytics.
- Built the data import path from the native apps (accounts and local-only data), which let existing users move to the new app through a regular update, without data loss.
- Built the team's tooling: AASA and assetlinks generators derived from the app config and deep-link classifier instead of a hand-kept list, a shared encrypted .env (sops, age) with a pre-commit hook, and Maestro E2E tests on Android with a recording and analytics report per run, in GitHub Actions.
- Wrote native Expo modules in Kotlin and Swift: a Braze bridge (deferred SDK initialisation with no lost session-start events, in-app message actions) and a home-screen widget for iOS (WidgetKit) and Android (Glance); push deep links work including on cold start.

Native iOS · May 2022 – May 2026

Two native apps (international and Norwegian), UIKit and SwiftUI, 11 markets; iOS team of 2–4.

- Co-designed and maintained the modular architecture: ~70 Swift packages on a shared codebase, 26 of which I created myself, including the networking and API layer (REST, GraphQL with Apollo), the user, pregnancy and baby domain models, the Braze service, mapping of GraphQL widgets to UI and deep-link handling. A deliberate trade-off: clear module boundaries at the cost of full-build time.
- Built the Onboarding, Settings, Offers, Tools, Search, Statistics and Sleep Sounds modules (audio engine, background timers, widget) and the home-screen widgets.

- Designed and implemented the app's theming system: colours, typography and spacing defined in one place, so periodic visual refreshes need no changes to feature code.
- Owned third-party and partner integrations: Braze, AppsFlyer, Kevel native ads, RevenueCat subscriptions, Contentful, Apollo GraphQL, insurers If Finland and Tryg Denmark, MitID identity verification.
- Built and ran the release process for both apps (2–6 releases a month): Fastlane and GitHub Actions pipelines to TestFlight and the App Store, code signing with Match, lint and format checks on every PR.

Lead Flutter Developer (contract) · Coolomat

Jan 2022 – Mar 2022 · remote

Slovenian maker of refrigerated parcel lockers · Coolomat Pick-Up app for iOS and Android in Flutter · lead developer in a two-person team

- Set up the project and its architecture (data / domain / presentation layers, use cases, RxDart, GetX) and built the integration with Coolomat's reservation API: order list with pick-up QR codes, remote locker opening after a GPS distance check, phone-number verification.
- Integrated Firebase push notifications with token registration, consent and permission handling in settings, and EN/SL translations; prepared icons and builds.

Senior Software Engineer (iOS) · DAZN Group

Apr 2020 – Apr 2022 · Katowice, Poland

Global live-sports streaming platform · iOS app in Swift with RxSwift (FRP), MVVM with a service layer

- Owned the ads and video playback area of the DAZN iOS app within a cross-platform Scrum team (iOS, Android, web).
- Wrote unit, snapshot, integration and Gherkin acceptance tests and supported QA with test automation; maintained CI builds (Jenkins).
- Took part in hiring iOS engineers: assessed candidates' assignments and conducted technical interviews.

Senior Software Developer · EUVIC

Jan 2014 – Apr 2020 · Gliwice, Poland

Software consultancy · iOS projects for a range of clients

- Payr (Norwegian fintech startup): built a bill management and payment app from scratch, integrated with payment services and identity providers.
- Developed Bosch Drivelog Connect (car data over Bluetooth / OBD2) and SUBWAY Loss Prevention (live surveillance combined with transactions), and built UPTIVO Trainer from scratch (fitness app syncing connected peripherals).

iOS Developer · Grupa SPOT · KiooiK

Jun 2012 – Dec 2013 · Gliwice / Wrocław, Poland

- Built the mHOSP iPad app for the med-tech industry from scratch, the Dr. Oetker Rezeptideen recipe app and an iPad memory game in Objective-C and Cocos2d.

HOBBY PROJECTS

Underfloor heating controller · electronics, hobby project

Self-designed controller on an ESP-01S (ESP8266) module with ESPHome firmware and Node-RED automation.

EDUCATION

B.Eng., Computer Networks and Telecommunications
Institute of Information Technology and Telecommunications in Kielce · 2004–2008
