PROFILE

Senior iOS engineer with 14 years on Apple platforms: Objective-C, Swift since its 2014 release, SwiftUI today; hands-on React Native / Expo since 2026. Strongest in modular app architecture, native integrations and release engineering. At Preglife I co-designed the architecture of two native apps and am co-building their React Native successor: the data migration and the native layer in Swift and Kotlin.

SKILLS

iOS	Swift (since 2014) · SwiftUI · UIKit · Objective-C · Swift Concurrency · Combine · SPM & modular architecture · Coordinator / MVVM · dependency injection · Core Data · WidgetKit · push notifications & deep linking · StoreKit / RevenueCat
Cross-platform	React Native · Expo · TypeScript · TanStack Query · local-first sync (SQLite) · GraphQL / REST · native Expo modules (Swift, Kotlin) · CRM & attribution (Braze, AppsFlyer)
Process & quality	unit / snapshot / E2E testing (XCTest, Jest, Maestro) · CI/CD & release management (Fastlane, GitHub Actions, EAS) · code review · analytics & crash monitoring (Firebase, Crashlytics)
AI tooling	Claude Code · agent rules (CLAUDE.md) · MCP (Jira, Confluence, Figma)

EXPERIENCE

Senior Mobile Engineer · Preglife

May 2022 – present · Katowice, Poland

App for expectant and new parents, 11 markets · 4.9/5 on the App Store (29k ratings)

Native iOS · May 2022 – present

Two native apps (international and Norwegian): UIKit, SwiftUI, Combine, Core Data; team of 2–4; maintenance-only until users have migrated.

- Co-designed and maintained the modular architecture: ~70 Swift packages on a shared codebase, 26 of which I created, including the networking and API layer (REST, GraphQL with Apollo), the user, pregnancy and baby domain models, server-driven UI (GraphQL-described components rendered natively) and deep linking.
- Authored the SwiftUI component library (separate repo: 34 widget components, a Playbook catalogue app, snapshot tests) and integrated it into the UIKit-based apps, where it renders the server-driven screens.
- Built the Onboarding, Offers and Sleep Sounds modules (audio engine, background playback timers) and the home-screen widgets (WidgetKit), among others.
- Designed and implemented the app's theming system: colours, typography and spacing defined in one place, so periodic visual refreshes need no changes to feature code.
- Owned third-party and partner integrations: Braze, AppsFlyer, Kevel (native ads), RevenueCat, Contentful, insurers If (Finland) and Tryg (Denmark), and MitID (identity verification).
- Set up and ran the release process for both apps (2–6 releases a month): Fastlane and GitHub Actions pipelines to TestFlight and the App Store, code signing with fastlane match, lint and tests on every PR.
- Kept improving the team's tooling: CI pipelines, a Sourcery generator that scaffolds a new feature module, and trials of new tools that speed up day-to-day work.

Preglife · React Native / Expo · May 2026 – present

New iOS and Android app released in October 2026 as the successor to both native apps; team of five.

- Wrote native Expo modules in Kotlin and Swift: a Braze bridge (deferred SDK initialisation, in-app message actions) and a home-screen widget for iOS (WidgetKit) and Android (Glance).
- Own the offers and ads module and account sharing (one account used by both parents); built the Tools, Wellness and Checklist modules end to end, from the data layer to analytics.
- Designed and built the migration of native-app data into the on-device SQLite database (local-first) for signed-in and guest users, run automatically on a regular app update; rolling out since October 2026.
- Built tooling that automates the team's work: AASA and assetlinks files generated from the app config, a shared encrypted .env (sops, age), and Maestro E2E tests (flows written with an AI coding agent against lint-enforced rules) that run in GitHub Actions with a screen recording and an analytics-event report.

Flutter Developer (side contract) · Coolomat

Jan 2022 – Mar 2022 · remote

- Bootstrapped the Pick-Up app for Coolomat's refrigerated parcel lockers (Flutter, iOS and Android; lead developer in a two-person team): architecture (data / domain / presentation, RxDart, GetX), reservation API, QR orders, GPS-gated locker opening, Firebase push, EN/SL translations.

Senior Software Engineer (iOS) · DAZN Group

Apr 2020 – Apr 2022 · Katowice, Poland

Global live-sports streaming platform · iOS app in Swift with RxSwift (FRP), MVVM with a service layer

- Owned the ads and video playback area of the DAZN iOS app within a cross-platform Scrum team (iOS, Android, web).
- Wrote unit, snapshot, integration and Gherkin acceptance tests and supported QA with test automation; maintained CI builds (Jenkins).
- Took part in hiring iOS engineers: reviewed take-home assignments and conducted technical interviews.

Senior Software Developer · EUVIC

Jan 2014 – Apr 2020 · Gliwice, Poland

Software consultancy · iOS projects for a range of clients

- Payr (Norwegian fintech, English-speaking team): built a bill management and payment app from scratch, integrated with payment services and identity providers.
- Developed Bosch Drivelog Connect (car data over Bluetooth / OBD2), SUBWAY Loss Prevention (camera footage matched to live transactions) and UPTIVO Trainer (fitness app working with external devices).

iOS Developer · Grupa SPOT, KiooiK

Jun 2012 – Dec 2013 · Gliwice / Wrocław, Poland

- Wrote the mHOSP iPad app for the med-tech industry, the Dr. Oetker Rezeptideen recipe app and an iPad memory game (Cocos2d), all in Objective-C.

HOBBY PROJECTS

Underfloor heating controller · electronics

Custom controller on an ESP-01S (ESP8266) module with ESPHome firmware and Node-RED automation.

EDUCATION

B.Eng., Computer Networks and Telecommunications
Institute of Information Technology and Telecommunications in Kielce · 2004–2008
