PROFILE

Senior iOS Engineer with 14 years on Apple platforms (Objective-C, Swift since its 2014 release, SwiftUI); building with React Native / Expo since May 2026, in production since October 2026. Core strengths: modular app architecture, native integrations and release engineering. At Preglife I co-designed the modular architecture of two native apps and now co-build their React Native successor, owning the native-to-RN data migration (100k+ users) and the native layer in Swift and Kotlin.

SKILLS

iOS	Swift · SwiftUI · UIKit · Objective-C · Swift Concurrency · Combine · RxSwift · SPM & modular architecture · Coordinator / MVVM · dependency injection · Core Data · WidgetKit · push notifications & deep linking · StoreKit / RevenueCat · localisation
Cross-platform	React Native · Expo · TypeScript · TanStack Query · local-first sync (SQLite) · GraphQL / REST · native Expo modules (Swift, Kotlin) · Android (Kotlin, Glance widgets)
Process & quality	unit / snapshot / E2E testing (XCTest, Jest, Maestro) · CI/CD & release management (fastlane, GitHub Actions, EAS) · code review · analytics & crash monitoring (Firebase, Crashlytics) · CRM & attribution (Braze, AppsFlyer)
AI tooling	Claude Code · agent rules (CLAUDE.md) · MCP (Jira, Confluence, Figma)

EXPERIENCE

Senior Mobile Engineer · Preglife

May 2022 – present · remote from Katowice, Poland

Swedish app for expectant and new parents, 11 markets · 4.9/5 on the App Store (29k ratings)

React Native / Expo · May 2026 – present

New iOS and Android app, successor to both native apps; team of five · App Store · Google Play

- Designed and built the migration of native-app data into the on-device SQLite database (local-first) for signed-in and guest users: 100k+ users migrated automatically via a regular app update since the October 2026 launch.
- Wrote native Expo modules in Kotlin and Swift: a Braze bridge (deferred SDK initialisation, in-app message actions) and a home-screen widget for iOS (WidgetKit) and Android (Glance).
- Own the offers-and-ads module and the account-sharing feature (one account for both parents); built three feature modules end to end in TypeScript: React Native screens, TanStack Query hooks, SQLite data layer and analytics events.
- Set up Maestro E2E tests in GitHub Actions: screen recording and analytics-event report per run; flows authored with an AI coding agent, conventions enforced by lint rules.
- Automated AASA/assetlinks generation from the app config; added an encrypted shared .env (sops, age).

Native iOS · May 2022 – present

Two native apps (international and Norwegian): UIKit, SwiftUI, Combine; team of 2–4 · maintenance since Oct 2026

- Co-designed and maintained the modular architecture: ~70 Swift packages in a shared codebase, 26 of which I created, including the networking and API layer (REST, GraphQL with Apollo), the user, pregnancy and baby domain models and deep linking.

- Set up and ran the release process for both apps (2–6 releases a month: fastlane and GitHub Actions to TestFlight and the App Store, fastlane match, lint and tests on every PR); led code review for the iOS team and owned its tooling, including a Sourcery generator that scaffolds a new feature module.
- Authored the SwiftUI component library (separate repo: 34 server-driven UI components, Playbook catalogue app, snapshot tests) that renders GraphQL-described screens in the UIKit apps.
- Built the Onboarding, Offers and Sleep Sounds modules (audio engine, background playback timers), the WidgetKit home-screen widgets and the theming system (colours, typography and spacing defined in one place, so visual refreshes need no changes to feature code).
- Owned third-party and partner integrations: Braze, AppsFlyer, Kevel (native ads), RevenueCat, Contentful, If Insurance (Finland), Tryg (Denmark) and MitID (identity verification).

Senior Software Engineer (iOS) · DAZN Group

Apr 2020 – Apr 2022 · Katowice, Poland

Global live-sports streaming platform, 200+ countries · iOS app in Swift and RxSwift, MVVM with a service layer

- Owned ads and video playback in the DAZN iOS app: AVPlayer, HLS live/VOD, FairPlay DRM, server-side ad insertion (Google DAI), Chromecast, AirPlay; cross-platform Scrum team (iOS, Android, web).
- Delivered Key Moments for live streams: match events (goals, fouls) received over a socket and shown as an overlay on the player, with one-tap seek to the moment.
- Built the playback and ads test suites (unit, snapshot, integration, Gherkin) and maintained Jenkins CI.
- Took part in hiring iOS engineers: reviewed take-home assignments and conducted technical interviews.

Flutter Developer (side contract) · Coolomat

Jan 2022 – Mar 2022 · remote

- Built the Pick-Up app for refrigerated parcel lockers from scratch (Flutter, iOS and Android; lead developer in a two-person team): reservation API, QR orders, GPS-gated locker opening.

Senior Software Developer (iOS) · EUVIC

Jan 2014 – Apr 2020 · Gliwice, Poland

Software consultancy · iOS projects for a range of clients

- Payr (Norwegian fintech, English-speaking team, 2018–2020): built a bill management and payment app from scratch, integrated with BankID and Vipps.
- Developed Bosch Drivelog Connect (car data over Bluetooth / OBD2), SUBWAY Loss Prevention (camera footage matched to live transactions) and UPTIVO Trainer (fitness app working with external devices).

iOS Developer · Grupa SPOT, KiooiK

Jun 2012 – Dec 2013 · Gliwice / Wrocław, Poland

- Wrote the mHOSP iPad app for the med-tech industry, the Dr. Oetker Rezeptideen recipe app and an iPad memory game (Cocos2d), all in Objective-C.

PHP Developer · eSKY, E NET PRODUCTION, RSI internet · Jul 2008 – Jun 2012 · Katowice / Rybnik, Poland

HOBBY PROJECT

Underfloor heating controller · electronics

Custom controller on an ESP-01S (ESP8266) module with ESPHome firmware and Node-RED automation.

EDUCATION

B.Eng., Computer Networks and Telecommunications
Institute of Information Technology and Telecommunications in Kielce · 2004–2008

LANGUAGES

Polish native
English B2, working language since 2018
