PROFILE

Senior Mobile Engineer with 14 years on iOS and, since 2026, React Native. For the last four years I have co-owned the architecture of Preglife's apps: two native iOS applications serving 11 markets (~70 Swift packages), and since 2026 their React Native / Expo successor. I take features from idea to release on the App Store and Google Play, make architecture decisions together with the team and keep quality high through tests, CI/CD and code review.

SKILLS

Languages	Swift (since 2014) · Objective-C · TypeScript · Kotlin (native bridges)
iOS	SwiftUI · UIKit · Swift Concurrency · Combine · Swift Package Manager & modular architecture · Coordinator / MVVM · dependency injection · Core Data · WidgetKit · push notifications & deep linking · StoreKit / RevenueCat
Engineering	unit / snapshot / E2E testing (XCTest, Jest, Maestro) · CI/CD & release management (Fastlane, GitHub Actions, EAS) · code review · analytics & crash monitoring (Firebase, Braze, AppsFlyer, Crashlytics)
Cross-platform	React Native · Expo · TanStack Query · local-first sync (SQLite) · GraphQL / REST · localisation for 11 markets
AI tooling	Claude Code in daily iOS and RN work · agent rules and instructions in the team's repositories (CLAUDE.md) · MCP integrations (Jira, Confluence, Figma)

EXPERIENCE

Senior Mobile Engineer · Preglife

May 2022 – present · Katowice, Poland

App for expecting and new parents, 11 markets · App Store 4.9/5, 29k ratings · apps.apple.com/app/id390427747

- In Preglife's new React Native / Expo app (iOS + Android), released in October 2026 in place of both native apps, own the offers and ads module, account sharing and the import of data from the native apps.
- Built the Tools, Wellness and Checklist modules from the data layer through to analytics. In local-first SQLite sync, authentication and onboarding my own work was the import path from the native apps (adopting the legacy login, reporting imported pregnancies and babies to the Profile Engine, unblocking stalled imports), a session that survives a market change, favourites and daily tips as account data, and health consents at registration.
- The app has been built by a team of five since May 2026. The technology switch was invisible to users: both account-based and local-only users moved over through a regular update, without data loss.
- Wrote native Expo modules in Kotlin and Swift: a Braze bridge that defers SDK initialisation until JS has configured it (no lost session-start events) and routes in-app message actions to the app, and a home-screen widget module for iOS and Android (Glance); push-notification deep links work on a cold start too.
- 2022–2026: in an iOS team of 2–4 engineers, co-designed and maintained the modular architecture of two native iOS apps (UIKit and SwiftUI; international and Norwegian) for 11 markets, ~70 Swift packages on a shared codebase; I created 26 of them myself, including the networking and API layer (REST, GraphQL with Apollo), the user, pregnancy and baby domain models, the Braze service, GraphQL-widget-to-UI mapping and deep-link handling. A deliberate trade-off: clear module boundaries at the cost of full-build time, because an SPM dependency graph of that size slows package resolution and compilation.

- Built the Onboarding, Settings, Offers, Tools, Search, Statistics and Sleep Sounds modules (audio engine, background timers, widget) and the home-screen widgets.
- Designed and implemented the app's theming system: colours, typography and spacing defined in one place, so periodic visual refreshes need no changes to feature code.
- Owned third-party and partner integrations: Braze, AppsFlyer, Kevel native ads, RevenueCat subscriptions, Contentful, Apollo GraphQL, insurers If Finland and Tryg Denmark, MitID identity verification.
- Built and ran the release process for both apps (2–6 releases a month): Fastlane and GitHub Actions pipelines to TestFlight and the App Store, code signing with Match, lint and format checks on every PR.

Senior Software Engineer (iOS) · DAZN Group

Apr 2020 – Apr 2022 · Katowice, Poland

Global live-sports streaming platform · iOS app in Swift with RxSwift (FRP), service-oriented architecture on MVVM

- Owned the ads and video playback area of the DAZN iOS app within a cross-platform Scrum team (iOS, Android, web).
- Wrote unit, snapshot, integration and Gherkin acceptance tests and supported QA with test automation; maintained CI builds (Jenkins).
- Maintained the codebase: dependency updates, SOLID-driven refactoring, code reviews across the team.
- Took part in hiring iOS engineers: assessed candidates' assignments and conducted technical interviews.

Senior Software Developer · EUVIC

Jan 2014 – Apr 2020 · Gliwice, Poland

Software house · projects for various clients, assigned wherever iOS work was needed

- Payr (Norwegian fintech startup): built a bill management and payment app from scratch, integrated with payment services and identity providers.
- Developed Bosch Drivelog Connect (car data over Bluetooth / OBD2) and SUBWAY Loss Prevention (live surveillance combined with transactions), and built UPTIVO Trainer from scratch (fitness app syncing connected peripherals).

iOS Developer · Grupa SPOT · KiooiK

Jun 2012 – Dec 2013 · Gliwice / Wrocław, Poland

- Built the mHOSP iPad app for the med-tech industry from scratch, the Dr. Oetker Rezeptideen recipe app and an iPad memory game in Objective-C and Cocos2d.

HOBBY PROJECTS

Underfloor heating controller · electronics, hobby project

Self-designed controller on an ESP-01S (ESP8266) module with ESPHome firmware and Node-RED automation.

EDUCATION

Bachelor of Engineering (B.Eng.), Computer Systems Networking and Telecommunications
Institute of Information Technology and Telecommunications in Kielce · 2004–2008
