PROFILE

Senior mobile developer with 18 years of experience, 14 of them on iOS. For the last four years I have co-owned the architecture of Preglife's apps: two native iOS applications serving 11 markets (~70 Swift packages), and since 2026 their React Native / Expo successor. I take features from idea to release on the App Store and Google Play, make architecture decisions together with the team and keep quality high through tests, CI/CD and code review.

SKILLS

Languages	Swift (since 2014) · Objective-C · TypeScript · Kotlin (native bridges)
iOS	SwiftUI · UIKit · Swift Concurrency · Combine · Swift Package Manager & modular architecture · Coordinator / MVVM · dependency injection · Core Data · WidgetKit · push notifications & deep linking · StoreKit / RevenueCat
Engineering	unit / snapshot / E2E testing (XCTest, Jest, Maestro) · CI/CD & release management (Fastlane, GitHub Actions, EAS) · code review · analytics & crash monitoring (Firebase, Braze, AppsFlyer, Crashlytics)
Cross-platform	React Native · Expo · TanStack Query · local-first sync (SQLite) · GraphQL / REST

EXPERIENCE

Senior Mobile Engineer · Preglife

May 2022 – present · Katowice, Poland

App for expecting and new parents, 11 markets · App Store 4.9★, 29k ratings

- Since May 2026, as one of five engineers, built Preglife's new React Native / Expo app (iOS + Android), released on 14 October 2026 in place of both native apps; existing users, both account-based and local-only, were migrated without data loss.
- In the new app, own the offers and ads module, account sharing and the import of data from the native apps; co-own local-first SQLite sync, authentication and onboarding; built the Tools, Wellness and Checklist modules from the data layer through to analytics.
- Wrote native Expo modules in Kotlin and Swift: a Braze bridge that defers SDK initialisation until JS has configured it (no lost session-start events) and routes in-app message actions to the app, a home-screen widget module (iOS and Android Glance) and a launch-argument backend switch for internal builds; push deep links survive a cold start.
- 2022–2026: in an iOS team of 2–4 engineers, co-designed and maintained the modular architecture of two native iOS apps (international and Norwegian) for 11 markets, ~70 Swift packages on a shared codebase; a deliberate trade-off: clear module boundaries at the cost of build time.
- Authored the Onboarding, Settings, Offers, Tools, Search, Statistics and Sleep Sounds modules (audio engine, background timers, widget) and the home-screen widgets.
- Designed and implemented the app's theming system: colours, typography and spacing defined in one place, so periodic visual refreshes need no changes to feature code.
- Owned third-party and partner integrations: Braze, AppsFlyer, Kevel native ads, RevenueCat subscriptions, Contentful, Apollo GraphQL, insurers If Finland and Tryg Denmark, MitID identity verification.

- Built and ran the release process for both apps (2–6 releases a month): Fastlane and GitHub Actions pipelines to TestFlight and the App Store, code signing with Match, lint and format checks on every pull request.

Senior Software Engineer (iOS) · DAZN Group

Apr 2020 – Apr 2022 · Katowice, Poland

- Worked on ads and video playback in the DAZN iOS app (live sports streaming), in a Scrum team spanning iOS, Android and web.
- Wrote unit, snapshot, integration and Gherkin acceptance tests; worked closely with QA on release quality.

Senior Software Developer · EUVIC

Jan 2014 – Apr 2020 · Gliwice, Poland

- Payr (Norwegian fintech startup): built from scratch a bill management and payment app, integrated with payment services and identity providers.
- Developed Bosch Drivelog Connect (car data over Bluetooth / OBD2) and SUBWAY Loss Prevention (live surveillance combined with transactions), and built UPTIVO Trainer from scratch (fitness app syncing connected peripherals).

iOS Developer · Grupa SPOT · KiooiK

Jun 2012 – Dec 2013 · Gliwice / Wrocław, Poland

- Built from scratch the mHOSP iPad app for the med-tech industry, the Dr. Oetker Rezeptideen recipe app and an iPad memory game in Objective-C and Cocos2d.

PHP Developer · eSKY · E NET PRODUCTION · RSI internet

Jul 2008 – Jun 2012 · Katowice / Rybnik, Poland

- Built the flight-search backend, e-commerce platform modules and intranet software (PHP 5); web-service integrations, production deployments, Scrum.

AI TOOLING

- Work daily with coding agents (Claude Code) on production iOS and React Native code and build their context for the team: co-author of repository instructions (CLAUDE.md / AGENTS.md), author of project skills (code knowledge graph for ~70 packages, snapshot tests, analytics conventions) and MCP integrations with Jira, Confluence and Figma, so the agent works to the same architecture rules and conventions as the team.

HOBBY PROJECTS

Underfloor heating controller · electronics, hobby project

Self-designed controller on an ESP-01S (ESP8266) module with ESPHome firmware and Node-RED automation.

EDUCATION

Bachelor of Engineering (B.Eng.), Computer Systems Networking and Telecommunications
Institute of Information Technology and Telecommunications in Kielce · 2004–2008

LANGUAGES

Polish — native
English — B2, working language at Preglife
